SUR LA DISCRETISATION ET L’ARTICULATION DISCURSIVE.
UNE APPROCHE COMPLEXE-FRACTALE

ABSTRACT: Saussure at a linguistic level, the “Socio-Discursive Interactionism” at an epistemological one, and the “complex-fractal” approximation of the physicochemical or biological phenomena have awarded a special importance to the phenomenon of the discretization of the forms. This article deals with the comparison between three phenomena of this kind but very different in nature: physicochemical, biological and verbal. The aim is to underscore their ubiquity and reflect on the innovation which are introduced by the linguistic signs in relation to other forms of communication and the implication or the evolution of the human thought

KEYWORDS: text; complex; fractal; discrete; articulate.
